

Projekat - treći dio:
Black box testiranje

Članovi tima:

1. Elma Nekić
2. Dinela Pešković
3. Elma Tirak
4. Adna Alihodžić
5. Zehra Buza

Za black box testiranje i analizu smo odabrale web stranicu prodavnice sportske opreme *Buzz* (<https://www.buzzsneakers.ba/>).

Osnovne funkcionalnosti koje nudi BUZZ stranica su:

- Prijava
- Registracija
- Pregled proizvoda po kategorijama
- Pregled blogova - Buzz crew
- Pregled prodavnica
- Dodavanje u omiljene proizvode
- Pregled omiljenih proizvoda
- Dodavanje u korpu
- Pregled korpe
- Pretraga proizvoda
- Pregled last buy proizvoda
- Prikaz pregledanih proizvoda (za prijavljene korisnike)
- Promjena lozinke (za prijavljene korisnike)
- Online plaćanje (za prijavljene korisnike)

Postavka

Zadatak 1:

Kreirati testne slučajeve (minimalno 5) primjenom tehnika za funkcionalno black box testiranje. Evidentirati ih sa svim neophodnim elementima za opis testnog scenarija na Azure DevOps platformi tako da se pokriju sve funkcionalnosti aplikacije. Identifikovane bagove na aplikaciji (minimalno 2) također dodati u Azure DevOps sa neophodnim elementima.

Zadatak 2:

Sve kreirane testne slučajeve iz prethodnog zadatka automatizirati kroz Selenium IDE a potom i kroz automation framework - Nunit Selenium. U testnom projektu koristiti POM i Singleton patern.

Zadatak 3:

Napisati API testove za odabranu aplikaciju koristeći Postman alat. Svaki član tima treba da kreira kolekciju od minimalno 3 API testa sa minimalno 4 validacije.

Zadatak 4:

Izvršiti stress i load testiranje aplikacije. Koristiti alat po izboru (Loadster, Pingdom, itd.). Izvršiti analizu rezultata (grafova i statistike) za oba tipa testiranja.

Izrada**Član tima: Elma Nekić****Zadatak 1:**

Funkcionalnost: Registracija

Pri kreiranju računa na web stranici, potrebno je unijeti lozinku. Za validnost lozinke postoje sljedeći kriteriji: mora imati najmanje 8 karaktera, bar jedno veliko slovo, bar jedno malo slovo, bar jedan broj i bar jedan specijalni karakter. Da bismo odredili minimalan broj testnih slučajeva, koristit ćemo ekvivalentne particije, pri čemu su particije validne kada su ispunjeni kriteriji, a nevalidne u suprotnom.

Ulazni uslovi	Validna particija	Nevalidna particija
---------------	-------------------	---------------------

Dužina	8 i više karaktera - P1	Ispod 8 karaktera - P2
Sadrži karaktere	a-z - P3	Ne sadrži a-z - P4
Sadrži karaktere	A-Z - P5	Ne sadrži A-Z - P6
Sadrži karaktere	Specijalni -P7	Ne sadrži specijalne karaktere - P8
Sadrži karaktere	Broj -P9	Ne sadrži broj -P10

Validne particije se mogu spojiti u jedan testni slučaj, dok se nevalidne particije tretiraju u posebnim testnim slučajevima.

Azure DevOps:

Prvi testni slučaj:

- Lozinka zadovoljava sve kriterije, npr. "AaBb58!!!"

Kako bi odredile testne slučajeve napravile smo sljedeću tabelu:

Uslov/Testni slučaj	1	2	3	4
Korisničko ime: T	1	1	0	0
Korisničko ime: N	0	0	1	1
Lozinka: T	1	0	1	0
Lozinka: N	0	1	0	1
Akcija				
Uspješna prijava	1	0	0	0
Neuspješna prijava	0	1	1	1

Na osnovu tabele zaključujemo da imamo 4 testna slučaja: uspješna prijava, neuspješna prijava s netačnim korisničkim imenom, neuspješna prijava s netačnom lozinkom te neuspješna prijava s netačnom lozinkom i netačnim korisničkim imenom.

Repro Steps

Opis:

Na stranici sam uočila problem sa sporim učitavanjem proizvoda prilikom njihove pretrage po kategorijama sa glavnog menija: muškarci, žene, djeca i brendovi. Ovaj problem može značajno uticati na korisničko iskustvo, posebno kod korisnika sa sporijim internet konekcijama s obzirom da se tada proizvodi još sporije učitavaju. Sporo učitavanje može biti posljedica velikih slika proizvoda, loše optimizovanih upita prema bazi podataka ili nedostatka cache sistema.

Koraci za reprodukciju:

1. Otvoriti web stranicu buzzsneakers.ba.
2. Kliknuti na bilo koju od glavnih kategorija u meniju: *Muškarci*, *Žene*, *Djeca* ili *Brendovi*.
3. Nakon odabira glavne kategorije, kliknuti na neku od podkategorija (npr. "Obuća", "Odjeća" ili određeni brend).
4. Zabilježiti vrijeme potrebno da se stranica sa proizvodima potpuno učita.

Očekivani rezultat:

Proizvodi se učitavaju u roku od 1-3 sekunde nakon odabira kategorije ili podkategorije.

prijavljivanja može biti rezultat loše optimizovanog backend sistema, preopterećenja servera ili nepotrebnog učitavanja dodatnih resursa tokom procesa.			
Koraci za reprodukciju			
1. Otvoriti web stranicu buzzsneakers.ba. 2. Kliknuti na dugme "Prijavi se" koje se nalazi u gornjem desnom uglu stranice. 3. Unijeti važeći email i lozinku u odgovarajuća polja. 4. Kliknite na dugme "Prijava". 5. Zabilježite koliko vremena je potrebno da sistem završi proces prijavljivanja i prikaže početnu stranicu.			
Očekivani rezultat:			
Nakon klika na dugme "Prijavi se", proces prijavljivanja traje najviše 2-3 sekunde.			
Stvarni rezultat:			
Nakon klika na dugme "Prijavi se", proces traje duže od očekivanog (6-10 sekundi).

Opis: Filteri za filtriranje proizvoda (po boji, veličini ili cijeni) ne funkcionišu ispravno. Nakon što korisnik odabere određene opcije stranica ne ažurira rezultate ili se prikazuju proizvodi koji ne odgovaraju odabranim kriterijima.

Koraci za reprodukciju:

- Otvorite bilo koju kategoriju proizvoda.
- Odaberite filter za boju ili veličinu.
- Provjerite rezultate.

Očekivani rezultat: Stranica treba prikazivati samo proizvode koji odgovaraju postavljenim filterima.

Stvarni rezultat: Stranica prikazuje proizvode koji ne odgovaraju filterima.

Grupni zadatak:

Zadatak 4: Loadster

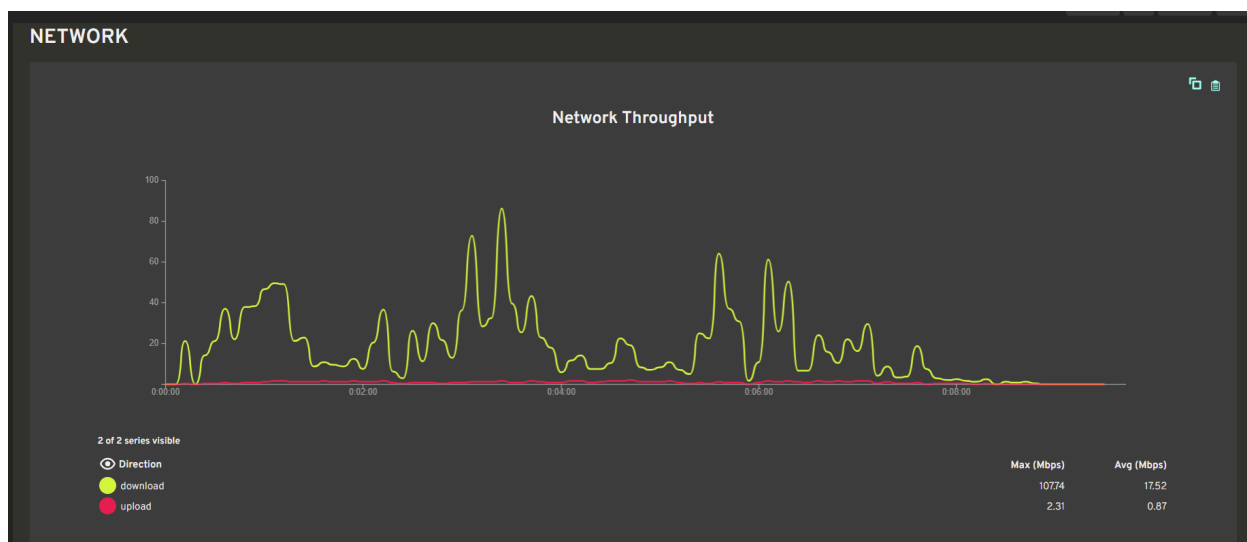

Analiza grafova Graf 1:

Na osnovu ovih podataka vidimo da je prosječno vrijeme učitavanja početne stranice oko 7 i po sekundi, što je jako sporo. Ostali URL-ovi koji su korišteni u testnom scenariju se također vrlo sporo učitavaju. Ovi podaci nam govore da skalabilnost stranice nije na zadovoljavajućem nivou i u slučaju da veliki broj korisnika istovremeno koristi stranicu, performanse se značajno pogoršavaju. Glavna pretpostavka je da na stranici postoji previše bespotrebnih skripti, slika i različitih sadržaja koji se u datom trenutku i ne koriste, a negativno utiču na brzinu izvršenja pojedinih akcija na stranici. Iz tog razloga bi se trebala posvetiti posebna pažnja optimizaciji korištenih skripti, stilova i uraditi optimizaciju sadržaja poput kompresije slika i slično.

Graf 2:

Iz ovog grafika očitavamo propusnost mreže pri povećanju zahtjeva. Vidimo da u trenucima kada broj korisnika dostiže svoj maksimum dolazi do naglog pada u propusnosti mreže. Ovo nam govori da performanse mreže nisu tako dobre, jer je poželjno da se propusnost mreže povećava sa brojem korisnika.

Preporučene akcije za poboljšanje performansi stranice:

Smanjiti broj HTTP zahtjeva

Smanjenje broja komponenti na stranici smanjuje broj HTTP zahtjeva potrebnih za prikazivanje stranice, što rezultira bržim učitavanjem stranice. Neki načini za smanjenje broja komponenti su kombirniranje više odvojenih skripti u jednu skriptu, kombirniranje odvojenih CSS fajlova u jedan fajl i korištenje lazy loading za slike.

Koristiti domene bez kolačića

Kada pretraživač zatraži statičnu sliku i pošalje kolačiće sa zahtjevom, server ignorira kolačiće. Ovi kolačići stvaraju nepotreban mrežni promet. Rješenje je da se statičke komponente traže sa zahtjevima bez kolačića, tako što se kreira poddomena i tamo se smještaju.

Dodati Expires zaglavlje

Korištenjem Expires zaglavlja komponente stranice postaju keširane, pa se smanjuje broj nepotrebnih HTTP zahtjeva pri narednim pregledima stranica.

Smanjiti DNS pretraživanja

Pretraživač ne može preuzeti ništa sa hosta dok se traženje IP adrese putem DNS-a ne završi, što usporava izvršenje. Zbog toga je potrebno smanjiti broj DNS pretraživanja.

Omogućiti gzip kompresiju

Kompresija smanjuje vrijeme odgovora smanjenjem veličine HTTP odgovora. Gzip je trenutno najpopularnija i najefikasnija metoda kompresije koja generalno smanjuje veličinu odgovora za oko 70%. Potrebno je konfigurisati server da kompresuje odgovore koristeći gzip.

Najveći dio sadržaja zauzimaju slike, pa bi se trebala razmotriti optimizacija slika korištenjem drugog formata ili smanjenjem rezolucije. Pored toga i skripte zauzimaju značajan dio prostora, pa je potrebna i njihova optimizacija.
